## **Corona: Government must finally take health protection and the precautionary principle seriously!**

**Statement of the diagnose:funk board**

<https://www.diagnose-funk.org/publikationen/artikel/detail&newsid=1541>

Germany, Europe, all over the world, people are threatened and social life is paralysed by the corona virus. The diagnose:funk board of directors takes the risks of this virus very seriously and does not take part in the alarmist, conspiracy theory speculations or trivialisations that circulate on the net. Preventing the spread of the virus, protecting people, even with temporarily drastic measures, is legitimate.

diagnose:funk receives daily inquiries whether this virus is related to 5G? So far there is no research known to us on the connection between the 5G frequencies and the corona virus. However, research has shown for years that the immune system is weakened by non-ionising microwave radiation, as used in mobile phones.

Already in 2013 Stanislaw Szmigielski (2013) presented a review on this, in 2017 the study by El-Gohary/Said on the weakening of the immune system by electromagnetic fields at 900 MHz was published [1]. Joel M. Moskowitz, Ph.D., School of Public Health, University of California, Berkeley, has presented a compilation of studies on this topic on this occasion (see Downloads). The immune system is mainly attacked by oxidative cell stress caused by non-ionizing radiation, a cause of many inflammatory diseases. This has been proven by more than 100 studies [2]. Almost every ElectrosmogReport discusses studies that name oxidative cell stress as the cause of damage. Kostoff et al. (2020) analyse in their 5G-Review that it is the interaction of many environmental burdens, an overall toxic situation, that makes people more and more susceptible to external influences. They write about 5G:

"Overlaying an existing toxic wireless radiation environment with 5G radiation will further intensify the already proven adverse health effects. Much more research and testing of potential 5G health effects under real conditions is needed before further introduction is justified". (Kostoff et al. 2020.) [3]

The eighth mobile radio report of the Federal Government confirms that the population will be exposed to an ever increasing dose of toxic microwave radiation by 5G:

"The digitalization of society is advancing rapidly. This will lead to a strong increase in wireless communication in general, with increased use of electromagnetic fields and thus also to an overall higher exposure of the population" [4].

The fight of many citizens' initiatives, doctors and scientists for a 5G moratorium and radiation minimization is of central importance for health protection, especially in view of mass illnesses.

### **This crisis is an opportunity to change course**

Let us learn lessons for the time after Corona. Sonja Sha's article in the magazine le monde diplomatique analyzes how the destruction of nature by humans promotes the spread of viruses.[5] For decades we have been governed by politicians and parties whose policy of subjugation to

industrial interests has led us into life-threatening situations, wars, environmental and health disasters.[6] They have had little respect for creation when it comes to industrial interests. Their policies have destroyed species against their better judgment, bees and insects are on the verge of extinction.

This crisis is an opportunity to change course. We must demand that politicians take action against environmental destruction, the climate catastrophe, coal-fired power stations, nuclear power stations, the extinction of species, the dismantling of the health system through economisation, products that make people ill, from meat production in mass livestock farming to mobile phone technology, and against the root of all evil, the growth mania, with the same consistency and the same amount of media coverage as they did against Corona. For the most dangerous mental virus that has been destroying our livelihoods for decades is the politically accepted greed for profit and its consequences, the overexploitation of natural resources, the destruction of the environment for hyperconsumption. It is high time that politicians took the warning cry from their own Federal Environment Ministry seriously:

"Climate change is progressing, habitats are disappearing and species are becoming extinct: A good life in an intact environment will no longer be a matter of course in Germany and Europe in the medium term. Central areas of our lives will have to change. The economy, work and our entire everyday life are facing a socio-ecological transformation. People are setting the course for this in this decade. Whether the path to a liveable, greenhouse gas-neutral future also depends on how digitization is designed ... To prevent digitization from becoming a fire accelerator of ecological destruction, we need crash barriers"[7].

### **Caution: The state of emergency must not become a normal state**

The current media campaign against the coronavirus proves the power of politics and media to change attitudes. However, the reaction of the population to it also shows on the positive side that people are prepared to change their attitudes and accept a change in lifestyle in order to preserve the basis of their livelihood.

However, we also see with concern how individual branches of industry are trying to make a profit from the crisis and how totalitarian structures could assert themselves in a smart way. The current state of emergency must not be used to introduce structures that establish the state of emergency as the normal state. It is precisely for the fight against environmental destruction that we need our fundamental democratic rights more than ever. After Corona, there must be no more "Keep it up!" in all areas of politics and economy.

### **We continue to work**

Our diagnose:funk employees continue to work at full speed, both at home and in the dispatch department, to improve our homepage, to develop new materials in order to be able to continue to supply you. Take the chance to study our new publications and videos in peace, especially the new anthology and our guidebooks in the citizens' initiatives, in order to be able to continue the fight for a low-radiation future, a 5G moratorium and WLAN-free schools even more effectively.

But above all: stay healthy and, through social cohesion, draw strength for the work on a better world in the enforced quarantine.
